Bulletin Information

The *Public Health, Religion and Spirituality Bulletin* is a publication of the Public Health, Religion, and Spirituality Network (publichealthrs.org). Two issues appear per year, Fall and Spring/Summer, with a re-bundled Spring/Fall “annual issue” released in January each year, and are published online and open access in HTML and paginated PDF format. Visit the *Bulletin* website to register for new issue notifications (<http://publichealthrs.org/bulletin/>). Prospective contributors of articles should read Oman & Long’s “Welcome” article (<http://publichealthrs.org/a001>) and contact us with ideas. The *Bulletin* Coeditors are Katelyn Long and Doug Oman, with Assistant Editors Angela Monahan and Ashley Meehan.

Editors' Introduction: Fall 2022 Issue #7

We are pleased to share with you the seventh mini-issue of the PHRS Bulletin. This issue opens by profiling the Caucus on Public Health and the Faith Community, a caucus within the American Public Health Association (APHA), and one of the best places within APHA and its meetings to meet others concerned with religion, spirituality and health, and learn more about these topics. This profile is written by Barbara T. Baylor, chair of the caucus, who was also interviewed in our previous Bulletin Issue #6 (Spring/Summer 2022). Guest speakers at next week's Caucus events will include David Satcher (former US Surgeon General), and Howard Koh (former Assistant Secretary, Department of Health and Human Services).

A second article is from Julissa Soto, a Colorado-based public health leader whose work on vaccination promotion has won many accolades. Her article is structured as her responses to a series of questions, such as "How did your work begin?", "What does it mean for you to work at the 'intersection' of religion and public health?" and "How do you navigate tension points that can emerge when faith and public health work in partnership?" In contributing this article she is pioneering a new genre of article for the Bulletin – a genre that we hope you find enjoyable, informative, and useful for navigating your own faith/health "tension points" – and a genre that, if successful, might be a vehicle for featuring the contributions to spirituality and public health of an ever-expanding circle of colleagues.

Our third article features an interview dialogue with Dr. Mimi Kiser, for many years a leader of Emory University's teaching on faith and health, and deeply involved with its Interfaith Health Program since 1993 when the program began at The Carter Center. After three decades in the field, and in dialogue with her former student Dr.

Stephanie Doane, Dr. Kiser reports that she has "never seen [as] many federal agencies take religion as seriously as they did during COVID-19, investing staff and programmatic resources... it has been phenomenal."

Finally, in our resources article, we present some of the latest research at the intersection of religion, spirituality, and public health, as well as upcoming conferences and funding opportunities. We also alert you to a newly published book on the history of a "spiritual dimension" of health within the World Health Organization (WHO) – a history beginning at the WHO's inception after World War II – and, according to the book, closely connected with many of the organization's ethical aspirations.

We wish you all a wonderful fall and winter and look forward to sharing with you our next mini-issue, currently targeted for publication in late spring.

Warmly,

The PHRS Editorial Team

APHA 150th Anniversary Celebration: The Caucus on Public Health and the Faith Community Explores Faith Communities as Essential Partners in Community Public Health Programs and Research

Barbara T. Baylor^[1]

Editors' Note: The PHRS Bulletin is pleased to spotlight goings-on in the growing world of research, practice, and education on public health, religion, and spirituality. In this article, Barbara Baylor gives a brief history of the Caucus on Public Health and the Faith Community, and highlights the Caucus' two special sessions taking place during the 150th Anniversary Celebration of the American Public Health Association.

The Caucus on Public Health and the Faith Community – an official caucus within the American Public Health Association (APHA) – began its work in 1996 under the growing recognition that tackling health issues is not the exclusive domain of federal, state, or local government workforce or public/private organizations. Today, the Caucus continues to espouse the historic work begun by the Faith Health Movement. Through its sessions at the annual meetings of the APHA, the Caucus provides a platform and facilitates opportunities for evidenced-based discussion and research, and promising new approaches that support the value of faith as a key to the delivery of effective community health services. The Caucus believes that promoting and enhancing collaborations between the faith community and the health community is an effective partnership for addressing physical, mental, emotional, spiritual, and social health challenges.^[2] One does not need to be a member of APHA to join the Caucus on Public Health and the Faith Community.

This year on November 6-9, in Boston, MA, the APHA will hold its Annual Meeting & Expo, and will be celebrating its 150th Anniversary of creating the healthiest nation and leading the path toward health equity. During this celebration, the APHA Caucus on Public Health and the Faith Community will honor the legacy of faith and health partnerships by hosting two special sessions, including several distinguished and influential speakers, that focus on the role of the

Faith Community in the ongoing work for health equity.

For decades, those engaged in the work we are honoring have been rising to the challenge held out by former U.S. President Jimmy Carter, who asked: “What if congregations, mosques, and temples cooperated with each other to improve the health of people in the communities where they are located?”^[3] In 1992, with a belief that faith communities could play a primary role in improving health, Dr. William Foege, former Executive Director of the Centers for Disease Control and Prevention (CDC), with the assistance of Former President Jimmy Carter, established the Interfaith Health Program (IHP) at Emory University in Atlanta, Georgia. The Program fosters partnerships between communities of faith and public health to close the gaps in preventing disease and improving health.

Yet even before that time, faith communities had been creating innovative programs and established health clinics, hospitals, and facilities. Some of the earliest hospitals were founded by major faith traditions, seen today in the myriad of Catholic, Lutheran, Baptist, Methodist, Presbyterian, Adventist, Jewish and other religiously branded medical centers, and in 1957, the Lutheran Evangelical Reformed Church and the United Church of Christ (UCC) formed Advocate Health Care. More recently academic faith and health centers have been founded, such as the Duke University Center for Spirituality, Theology, and

Health.^[4] We have a broad and long legacy to honor!

First, on Sunday, November 6, 2022, 6-7 p.m. in the Boston Convention Center, the Caucus will host a Celebration titled: “United to Heal: An Interfaith Celebration of Holistic Healing and Peace”. The Program is a multi-faith celebration that will honor diverse worship, prayers, reflections, and music. The event is free and open to the public. Several multi-faith cultures and traditions from the Greater Boston area have been invited to participate.

Second, on Monday, November 7, 2022, 10:30 a.m.-12:00 p.m. in the Boston Convention Center, the Caucus will host a special Invited Session titled: “Faithful Dancing with the Bears of Inequity: Past, Present, Future”. The title is derived from a quote by Dr. Joycelyn Elders, former U.S. Surgeon General, who once compared the work of public health to dancing with a bear. She said, “You don’t quit when WE get tired; only when the bear gets tired.”^[5] Historically, the Faith Community, which never tires of its dance with bears, has been integral to the success of social reform movements in the U.S.

“Faithful Dancing with the Bears of Inequity: Past, Present, Future”, will offer a retrospective view on the decades of faith involvement in health care delivery, caring for the sick, health education, health promotion, disease prevention, and health equity and will focus on: 1) the value and importance of the faith community’s role in the past, 2) the current faith health movement, research, and programming, 3) the continuing journey to rebuild trust and foster a sense of hope and mutual support between public health and faith, and, 4) the recognition that faith communities are more than physical spaces but are communities of faith filled with significant culture, history, and traditions which need to be passed on to future generations.

This rousing conversation will be moderated by Dr. Caswell Evans, the primary impetus in the formation of the Caucus on Public Health and the

Faith Community and a former President of APHA, and Barbara T. Baylor, MPH, Chair of the Caucus. Our distinguished invited guests include:

- *Dr. Howard K. Koh*, Harvey V. Fineberg Professor of the Practice of Public Health Leadership at the Harvard T. H. Chan School of Public Health, former Assistant Secretary Dept. of HHS
- *Dr. David Satcher*, former Surgeon General of the U.S., former Executive Director of the CDC, Founder, The Satcher Leadership Institute, Morehouse School of Medicine
- *Dr. Somava Saha*, Founder and Executive Lead of Well-Being and Equity (WE) in the World, and Well Being In the Nation (WIN)
- *Mr. Jeffrey Simms*, Assistant Professor Health Policy, Gillings School of Global Public Health, University of N.C. at Chapel Hill

For more information about the Caucus and for membership, please contact Barbara T. Baylor, MPH, Chair via Email: baylorbarbara@gmail.com

Facing Challenges in Public Health Change for a Person of Faith in Colorado

Julissa Soto¹

Editors' Note: We are pleased to present a new type of article that features a wide range of professionals working at the intersection of religion, spirituality, and public health. In this style of article, practitioners answer a set of questions in their own words to convey the motivation for their work, their successes and challenges, and advice to others who seek to engage in their communities.

Julissa Soto is a public health consultant in Colorado. For work on vaccination promotion among Latino communities and other bridge-building public health efforts, she has won many accolades from Colorado State and National leaders, and is recognized as one of the state's leading Latino immigrant advocates. She serves on the Health Equity Commission for the Colorado Department of Public Health and co-chairs regional programs that provide guidance on health equity and outcomes. She was recently awarded [the Diversity, Equity and Inclusion Champions in Advocacy Award for Colorado Springs, Colorado](#), the [Big Shot of the Year award from Immunize Colorado](#), a National Advocacy Award from Voices for Vaccines, the [2022 Excellence in Immunization Equity for the Immunization Coalitions and Partnerships in Minneapolis](#), and the [Colorado Public Health Association's 2022 Award for Excellence in the Promotion of Health Equity](#).

Question 1: Very briefly, please describe your work for PHRS readers.

I act as a bridge between the Latino community, public health leaders, and religious leaders. In that sense, I'm a messenger, an intermediary, between these groups that do not have a good understanding of each other. So, I help make the connections to help them understand each other better, and I do it through the health tool of vaccination. One of the major projects I've led in the past few years is "[Vaccine Sunday](#)" held at Catholic Churches in Colorado. These events take a huge amount of effort to put together because

Julissa Soto (right) and a recently vaccinated and grateful friend

you have to work with all three groups, which, again, do not know how to work together well. The inability to know or work well together contributes to the mistrust, distance, and siloing that keeps our health system broken and health system disparities thriving for decades.

Question 2: How did your work begin? What are the personal stories that drive or motivate you?

Twenty-four years ago, I tried to get health care support for my sick kids, including in the ER. And I struggled with roadblock after roadblock to access care. The health system was incomprehensible to me and I was scared for the health of my kids. I realized our health system was not meant to be understood by anyone, much less the community that it should serve. I promised God then that I would one day try to figure out this health system and then help others understand and access it. And I'm still trying!!

Question 3: What does it mean for you to work at the "intersection" of religion and public health? What does this work look like "in public" and how does work at these intersections play out at personal level?

Monsignor Jorge de los Santos, the pastor of Our Lady Mother of the Church in Commerce City, Colorado, pegged it best speaking at a mobile vaccination event I organized there on Easter Sunday 2022. [He said](#), “*Religion is not only about being in the church. Religion is about the common good. For the health of the body and soul. Then as we promote the good spirituality, then we promote good health for the people.*” In other words, if our faith only promotes spirituality but ignores the intersection with human physical suffering like when people are left out of health care, then we are not following Christ’s admonition to care for the least of our brothers and sisters. Spirituality becomes superficial and empty then. Faith without action is indeed empty. It is sanctimonious and hypocritical.

So, I bring Vaccine Sunday programs to churches vaccinating for COVID-19. And then, as I learned from that, “*Vacunas en su Casa*”, I now bring other vaccinations to my community, working with state and county health departments. Vaccinations are needed, but hard to get or afford for my community.

I’ve also lowered the roadblocks for my community, lowered the roadblocks that pastors face in linking spirituality with health, and lowered the roadblocks for health departments that keep them from relationships with the community. These are relationships they [health departments] should have had, but never have had before.

I do this work by relying on and listening to God for guidance. I ask God to show me how to lower the roadblocks to be effective; to strengthen me from the resentment that comes with this work; and to resist attempts to rebuild roadblocks by pastors, health systems, and even community members. God helps me in this constant mediation in making our health system comprehensible and functioning for health.

Question 4: What have been some of the big “wins” you’ve experienced along the way? What factors were at play to make these “wins” possible?

Getting community members healthcare, starting with vaccination, where they have never had care before. Barrio by barrio. Building trust in a health system people have mistrusted for decades.

Rattling the cages of healthcare decision-makers who otherwise wouldn’t be moving on the changes needed. I’ve learned that without the temerity of cage rattling, nothing changes. I have been very grateful for health leaders along the way who recognize how critical dedicated frontline work is and make my job so much easier, people like Jill Hunsaker Ryan, the executive director at the Colorado Department of Public Health and Environment, Kim Bimestefer the executive director of Colorado’s Department of Health Care Policy and Financing, Annie H. Lee, the President and Chief Executive Officer of Colorado Access, and John Douglas, the executive director of the Tri-County Health Department

I also help pastors to take actions to truly address inequity in healthcare, not just ignoring it or talking about it as a distant goal. And to make these changes something that becomes THEIR vision, health care decision-makers and pastors, not just mine. Because it’s not about Julissa. This happens through all the vaccination events that I organize. Communities get care, and cages get rattled to make things happen.

And then other miracles happen too. At a March 2022 vaccination event at St. Mary Magdalene Catholic Church in Denver, I asked the pastor what he needed for his people. He said a food bank. Something about the way he earnestly expressed this need and my own connection with God, told me: “well, this isn’t vaccination, but it is health care. Let me see what we can do”. I opened the appeal up to leaders in health care, and miracles happened. We celebrated the opening of the new food bank at St. Mary Magdalene this July 2022. God makes things happen through the miracles of genuinely working through people.

Question 5: What are some of the hardest challenges you’ve faced? What do you do in moments of great struggle?

One of the most significant challenges I face is holding health system decision-makers accountable to communities (cage rattling). And having to fight them when they are not leading. It's very challenging when health leaders don't like what you do but don't have a clue what to do themselves. If you don't have leadership ability, what are you doing? If you go shopping with no money, why are you shopping? We don't need public health leaders who are window shopping with nothing meaningful to buy. When they too often sit in isolation from the community, lamenting disparity, but resent exploring change that could make a difference. Some of the changes I advocate for are things like:

- 1) *Training staff that interact with people to be personable. Not having sterile/clinical attitudes or treating people indifferently or disrespectfully.*
- 2) *Training managers to hold staff accountable. Are health staff welcoming and warm, consistently making people feel they belong and are wanted? Staff must know this is a job requirement.*
- 3) *Having public health navigators regularly enter into the Latino community to connect with residents, business owners, and churches, especially before health events. It's important to make sure the community knows why the events are important to them and their families. It's also important to do health outreach before, during, and after health events. Letting people know the health system cares and can be trusted.*
- 4) *Speaking in Catholic churches that are predominately Latino (over 50% of Latinos are at least culturally Catholic) on Sundays, through the "Vaccine Sunday" and "Vacunas en su Casa" programs to reinforce caring for Latino health.*
- 5) *Scheduling mobile health events in the Latino community at times when*

community members are available. That means NOT 9am to 3pm Monday through Thursday, when it's only convenient for clinicians. Reaching the Latino community means weekends and evenings when people are more easily and regularly available.

- 6) *Being innovative. Making events fun. For example, for children, during the Christmas season, bring Santa Claus! On Dia del Nino, have staff dress up as superheroes. For adults, have music — even dancing!*

These are things I advocate for with health system leaders. For health staff in the trenches of hands-on care, it's important to understand the new approaches of engaging the community, where the community is located, and when they're available. It's also important to decisively but compassionately address their resentment, impatience, and sometimes disrespect for the community and me.

For my work with religious leaders, it's important to hold them accountable for the health of their congregations and communities. Helping them understand the intersection of spirituality and health. Within the Catholic community, we have Dominicans and Franciscans who tend to get it and this is not a hard sell. For the more conservative Catholics (Neocatechumenal Way), it's challenging for some reason.

In moments of great struggle with all of this work, I remember my ex. He used to beat me up regularly, all the time. That was truly hard. With my current work in public health, it's different; I don't get beat up all the time! Give me Public Health!

And more seriously, I turn the struggle over to God. I say, "God, this struggle I'm in is too much for me. I'm turning it over to you and going to bed". And when I wake up the next morning, I

have the energy and the insight I didn't have before.

Question 6: What has the work required of you that you did not expect?

Brutal hours, which have now become normal for me! Fridays, weekends, and evening hours. That's when people are available. When I started out, I didn't realize those hours and days of work would become the new normal. I've also been surprised by resentment from healthcare associates and even family members who don't get the work I am doing. And there is also huge resentment from anti-vaxxers. I knew they existed and thought we could give each other space. That sometimes doesn't happen. Anti-vaxxers can get in my face. One pulled up his shirt and showed me his gun, essentially threatening to use it if I didn't leave. And there are also pro-vaxxers who are afraid of anti-vaxxers. I can respect anti-vaxxers who are civil, but we should not be letting them dominate any of the conversation.

Question 7: How do you navigate tension points that can emerge when faith and public health work in partnership?

I do this by helping pastors understand that vaccination is a gift from God or He would not have given science, the knowledge, to develop it. It should be used then for what God intended it for. To protect life. Too many Catholic pastors (as well as Protestant) are subject to social media misinformation or don't understand enough about vaccination to advise their people. They need help to understand that COVID is dangerous, especially for the immunocompromised, the unvaccinated, and pregnant women. Promoting vaccination then is an act of charity that all people of faith are called to. I step in to provide the truth of vaccination so pastors have confidence to promote it and then work in partnership with public health.

Question 8: What has been life-giving about this work?

I know my Latino community is left behind. I see them crying for help when help is available, but not for them. That's when I know my work is making a difference. For example, when an elderly lady gets her first COVID-19 shot (see photo at right) or when a young Latina hugs me in gratitude because the shot didn't hurt and she wants to come back! (see photo above) This work gives me purpose in life.

Making a difference: Happiness at receiving first COVID-19 vaccination shot.

Question 9: If you were able to give advice to your younger self, perhaps when you were just starting this work, what would you say?

Know what you're signing up for. Remember that passion is not teachable. It's something you develop in yourself. Look for mentors who will help develop your passion. Beware of fakers who will mislead you that it's all about you and personal gain. Instead, look for spiritual mentors like Rich McLean, who supports me and can tolerate my eccentricities but knows good when he sees it. It also helps to have a mentor with a mission from God, too. I know God supports me. But I need human support too, support that is genuine, not fake, contrived, or conditional.

I would also say that like the Marines, you have to be ready to battle hitting the beaches. You're going to get resistance. Keep your strength in God so you don't wilt or succumb to giving up. This work isn't for everyone. For some people, having a desk job writing reports and organizing meetings is better. I've seen the work I do send people to the hospital for stress, because you will get resistance in change making.

Finally, know your work balance. Know yourself and use the gifts that God gave you. Don't expect the impossible, but don't give up on the possible

as God shows you. Understand you're not going to Cancun. You're going to the hood. And love it!

[1]^ Julissa Soto, Public Health Consultant on Latino Health Care (julissamolinasoto@gmail.com).

Dynamic Dialogue: Mimi Kiser and Stephanie Doan-Soares Reflect on Their Journey in Religion and Public Health – Past, Present, and Future Opportunities

Ashley Meehan^[1] and Angela Monahan^[2]

Editors' Note: We are pleased to present an adapted group-conversation version of the PHRS Bulletin's series of featured interviews with influential contributors who have shaped the field of public health, religion, and spirituality.

We present a conversation between Drs. Mimi Kiser and Stephanie Doan-Soares. Mimi Kiser recently retired from the Rollins School of Public Health at Emory University, where she spent thirty years teaching and working with the Interfaith Health Program (IHP)^[3] and on the leadership team of the Religion and Public Health Collaborative^[4] for the university. Stephanie Doan-Soares completed her Master of Public Health degree at Emory University, working closely with Mimi and others at IHP. Stephanie recently completed her Doctor of Public Health degree at Harvard University's T.H. Chan School of Public Health.

Mimi and Stephanie were engaged in conversation for the PHRS Bulletin by Ashley Meehan, a PhD Student at Johns Hopkins Bloomberg School of Public Health and a co-editor of the PHRS Bulletin. Ashley received her MPH at Emory University's Rollins School of Public Health, with a certificate in Religion and Health. Ashley worked with Mimi at the Interfaith Health Program during her time at Emory.

Ashley Meehan: Mimi, it would be great if you can kick-off our conversation. Can you recap a bit about the history of religion and health at Emory University, and how you got started at this intersection?

Mimi Kiser: Yes, I'll start with some historical context for the Interfaith Health Program (IHP). In the 1980s and 1990s, there were two important themes emerging in public health. One was

eliminating health disparities, and the other was around exploring social and behavioral determinants of health. At this time, there were two key people that helped shape this larger context, specifically for religion and health: Dr. William

Mimi Kiser

Foege, who was the director of the Centers for Disease Control and Prevention (CDC) from 1977-1983, and Dr. Gary Gunderson.

In 1984, Dr. Foege had just left his position at CDC, and President Jimmy Carter had asked him to be the executive director of The Carter Center. One of Dr. Foege's early leadership activities at The Carter Center was a convening called, "Closing the Gap."^[5] The convening was one of the efforts to frame for this social and behavioral knowledge and sector engagement that later informed a lot of new thinking of social determinants of health and setting a call to action addressing health inequities.

About ten years later, in 1993, Dr. Foege and Dr. Mike McGinnis published an article^[6] in JAMA on lifestyle factors underlying the leading causes of death – not the diseases themselves, but the factors in people's lives underlying those causes. That was really a seminal representation of the

shift at the time to a focus on lifestyle and social determinants of health that undergird disease in a pretty significant way. This opened the doors for new strategic thinking and research about social contexts. I think this was partially spurred by the HIV epidemic, too. The emergence of HIV really forced public health to take the social and behavioral aspects of health more seriously.

So, that hopefully paints a picture of the context in 1992, when IHP was started at The Carter

decisions about risk, as well as how the social environment, structures, and systems that influence peoples' learning and conceptualization of who they are and the value they have. I got involved in a faith-based youth sexuality education project, evaluating a middle school age program, and ended up doing my master's thesis on that. This was happening at the time when HIV/AIDS was really at the forefront in the early 1990s, and people were trying to think about how people could make different decisions about their

I have never seen this many federal agencies take religion as seriously as they did during COVID-19.

– Mimi Kiser

Center.^[7] At its founding, the IHP was called The Interfaith Health Resources Center. It was oriented around the “Closing the Gap” conversation and practical in terms of guiding congregations and faith-based organizations in how to do public health. Dr. Foege brought Dr. Gary Gunderson into the mix, which is significant because Gary had a background in faith-based work, oriented in the social experiences of communities and the natural inclinations of congregations and religious institutions.^[8] In the late 1990s/early 2000s, IHP transitioned from The Carter Center to the Rollins School of Public Health at Emory University where it continues to live today and has been a really great fit all these years.

So who am I, what called me, and how did I find this intersection? In the early years of IHP, I had gone back to school in a mid-career shift and was getting my MPH at Emory. Whenever there's a new field emerging, a lot of what moves and shapes it are the people who are inclined to generate ideas and put seemingly unconnected pieces together in new ways. In 1990, that is what was happening at The Carter Center and Emory. I was really drawn to think about the social environment, particularly around meaning and how one understood and valued oneself in making

risk. It was exciting for me to be thinking about social environments, particularly congregations and faith-based organizations, that youth find themselves in as they are discovering their emerging identities. Because of my work in that space, there was clear alignment with what IHP was becoming. I started working with IHP during its first year, and the rest is history!

I now want to shift to Stephanie, because a really big part of the work that grew at Emory was the interdisciplinary learning opportunities for emerging leaders, and Stephanie is now one of those leaders. Stephanie, you had some pretty unique experiences in the context of religion and public health learning and practice. I want to know how you came into this emerging environment and how it strengthened and built who you are today.

Stephanie Doan-Soares: I could say I feel a sense of calling to this work, but it's not always very tangible. I grew up in a very Christian home and my faith has been very important to me. For

Stephanie Doan-Soares

most of my life, I wanted to be a doctor. I was on the pre-med track in college, majoring in biology and I ended up taking this class in religion. It turned into a minor in religion, and eventually a double major in biology and religion. While that was happening, I realized I didn't want to be a clinical doctor. We organized a training in Philadelphia for religious leaders 10 years ago on trauma. Philadelphia is the sixth largest city, with one of the highest levels of deep poverty, a very high percentage of kids living in poverty, and astronomical numbers of homicides and incidents of gun violence. Who is on the front lines? Congregations and religious leaders. The question then was, how do we begin to educate our religious and lay leaders, and congregations, about mental health and trauma? We build a system of community supports out in the field, especially when so many people who are encountering and being involved in trauma, violence, and mental health issues, don't have access to or don't go to the health care system because there's so many barriers. Philadelphia has been a big leader in training clergy around trauma and mental health. What I learned from Guy Steuart has infused everything I've done, because the core is really how do we bring people together? If we can't bring people together and build the bridges and relationships to walk together, we won't be able to solve these compelling problems that we have.

I took a trip to South Africa to learn about the racial reconciliation efforts that were happening, and got to spend time at an HIV clinic. On that trip, I realized that public health was an entire field, so I came back for my senior year of college and finished out my dual degree in biology and religion, and started applying to public health schools. I applied to Emory and a few other places but when I went to the accepted students' day at Emory, Mimi introduced herself, IHP, and the work they were doing. This light bulb went off in my head that there was actually a way to put together the two things that I had been doing – biology, health systems/health structures, and religion. Trying to make sense of how all these things fit together was always a goal. I want my life to feel integrated and connected, so all of a

sudden, meeting Mimi and hearing about the work of IHP made it clear that it was possible to put these things together. I ended up coming to Emory and during the summer before I started, I sent an email to Mimi and Gary and said "I heard you talking at the accepted student's day. I would love to get a job with you at the Interfaith Health Program." They interviewed me and decided to take me on as a graduate assistant. And that's how I got my start in this work.

Mimi Kiser: We are very happy that that happened. You started in 2005, and in 2006-2007, two things were happening. One was that we were being much more intentional about the academic environment around religion and health. We were trying to think through how to navigate interdisciplinary education between the School of Public Health, the Department of Religion, and the School of Theology. Out of this strategic planning came the Religion and Health Certificate and the Religion and Public Health Collaborative. I'm wondering, Stephanie, if you could speak to some of these applied experiences you had with IHP and how they've strengthened who you are and built capacity for the kinds of leadership positions that you've been in. What are some distinctive moments you remember in this applied religion and public health work? Now, we have a lot more courses in religion and health and students are doing extensive research projects, but your experience was really heavily immersed in the applied areas.

Stephanie Doan-Soares: One thing that was really important was being able to connect with your network of people. I was really influenced by you and Gary and others within IHP, but there was a group of people who were sort of on the fringe or the next level out. I think of Deb McFarland, who did so much work on health systems, which brought in the conversation around faith-based organizations and their involvement in health systems. There was Roger Rochat and his work in reproductive health, and Rafael Flores – it was really powerful for me to see how different people were applying these concepts across fields and

topics and in different ways. That was a really important piece of this work.

These connections were also important for being able to connect to their work, too. I did a lot of work around mapping religious health assets^[9] in Zambia and Lesotho with Deb, which was really applied research that was community and practice driven. These applied experiences really shaped how I saw my role. How do I take what the scientists are saying and turn it into things that someone on Capitol Hill wants to read, or one of our partners wants to read? That thinking that emerged for me at Emory was needed in my future work, for example, during my time at the CDC Country Office in Bangladesh – where I led a research portfolio of practice-based research. So you're spot-on, Mimi, the opportunity to do really applied work was instrumental in setting up my career. I want to be doing things that are practical and applied and really make a difference. A lot of people are doing things to gain and create knowledge, which is important, but I like being able to be the bridge and have that make sense in practice.

Mimi Kiser: During that time period, there wasn't a big welcome mat to these ideas of practice-based programs and applied research in religion and health. But there was power in this translational and relational role. Through its Faith Health Consortium partnership relationships with universities in Africa, IHP was able to bring in people like Deb and Roger who had been doing relevant work, in a clear way and helped us demonstrate the different possibilities.

Stephanie Doan-Soares: I was also thinking about the time I traveled with you and Gary and the team to South Africa, as we were presenting the final version of our report on mapping religious health assets. I think one thing that was important about that trip was there were people from the World Health Organization there, along with all of these different players. Even ten years after that trip when I was in Bangladesh leading a CDC team, those partnerships and understanding the dynamics and how all of these players fit

together was really important for me. I don't know how I would have navigated some of the positions I was in without understanding their context earlier on.

I remember we also had a grant from CDC around engaging faith-based organizations around pandemic preparedness and influenza.^[10] Through that, I got to know Dr. Scott Santibañez, and that relationship has been important throughout my whole career at CDC.

Mimi Kiser: Something that was underlying that grant, and the whole concept that came out of the work of the IHP with key partners, was this concept of understanding the different religious health assets and how the strengths of faith-based organizations could contribute and be understood in their role in community health. You became involved in that more in some way as you developed and built your thesis. You were very creative in how you did that. Can you say more about that?

Stephanie Doan-Soares: For my MPH thesis, I focused on a book^[11] that Gary Gunderson had written, describing the eight strengths that congregations have^[12] for impacting the health of their community. One thing that we had talked about was that it would be helpful if there was some sort of tool for congregations to use to either assess their strengths or to think about how they could build them. I really focused my thesis on talking to congregations to understand how they might view their own strengths and whether there was some overlap between how they talked about it and how Gary had sort of theorized it based on his experiences. The strengths of congregations in building and maintaining social capital are what, in many ways, position them to contribute to health and be a health asset in the community.

In addition to his book on congregational strengths, Gary also had a book^[13] on boundary leadership. That term, boundary leadership, really sticks with me as something that has always defined my career. It is a way of thinking about how you go across boundaries and figuring out

how we do cross-sector collaboration in meaningful ways.

Mimi Kiser: What's becoming clear is how in an emerging field like this, particularly an interdisciplinary one where there are lots of different kinds of ideas, it's important to have people like you bring a new way of thinking, to put ideas together and make them work. I could feel all these pieces coming together to build the substantial body of work that contributes to the health of the public.

So I know that after you graduated, Gary asked you to come to Memphis and work there,^[14] so you had more time to grow and develop in a significant way. You had this learning at Emory, and then you went to Memphis, and had experiences at the Department of Health and Human Services (HHS) and in Africa, stepping into some fairly high-level roles and responsibilities.

Stephanie Doan-Soares: I left the job in Memphis to start a fellowship program at CDC that included an opportunity to do three-month rotations in different offices across HHS. I had lined up a rotation at the Center for Faith-based and Neighborhood Partnerships at HHS and got there maybe a week or two before H1N1 happened. One skill that has continued to follow me in my career is how to quickly adapt. This ability to change plans really quickly had been a part of my learning with IHP, and it was really helpful when I ended up being tasked as the coordinator of a guidance document for faith-based organizations and congregations on how they could support the H1N1 response. That included collaborating between IHP and Dr. Scott Santibañez and others at CDC who were leading the H1N1 response, and the partnerships with IHP's Institute for Public Health and Faith Collaborations and the HHS Faith-based office were instrumental in activating vaccination sites. We benefited a lot from the expertise of the folks activating these sites as we were writing the guidance documents.

Then about a year later, I still had one rotation left. I was talking to Mimi and the team at IHP when Sandy Thurman, director of IHM at the time, came up with this idea that I should go to Kenya. There was a big need in the PEPFAR office to do some coordination, but also an asset mapping project that IHP was involved in that could use some help. This, yet again, helped set me up for a job I took later in Bangladesh. I credit that opportunity to Sandy and her relationships in the PEPFAR world.

Then about another two years later, Sandy called me up again and said, "Stephanie, I need you to go back to Africa and help with this meeting we're planning." Sandy organized this elaborate swap of people so my job was covered, and I went to Kenya for several months to help plan a big meeting that brought together faith leaders from four east African countries to get their insights for the reauthorization of PEPFAR. We were really trying to include country and local leadership to move the HIV response forward in East Africa — something you can't do without working with faith leaders.

Mimi Kiser: I remember that you had a significant role in coordinating the convening for East African countries, and you had this unique responsibility of connecting with religious leaders from four countries. That is not a small endeavor. I had this view into the relationships that you had built and you were kind of facilitating my connection to them. It was really extraordinary, I think, to be on the other end of what you built across the religious leaders and other faith-based and public health organizations and government entities that were there.

So, there's organizational relational and there's human relational, but there's also a cross-cultural dimension of that, which I think you naturally had. But you really blossomed with the cultural and religious pieces, which was likely developed from the engagement you had with religious leaders during your time with IHP. That was quite a moment for me to see that.

This has led me to reflect on how the religion and health idea grew at Emory before the Interfaith Health Program. But then with The Carter Center's engagement and the leadership at the level of Dr. Foege and President Jimmy Carter. Having the kind of inroads and connections and relational connections with the CDC, the HHS Faith-based Office, and other partners really helped amplify religion and public health because of those organizational relationships. There was pretty significant institutional and structural amplification of religion as a part of public health programming.

Stephanie Doan-Soares: What do you think helped build those connections from IHP to these pretty big institutions?

Mimi Kiser: My first thought is around the credibility of Dr. Foege and his position, but there was something kind of hidden and unspoken historically. The nature of a lot of faith-based work aligns pretty closely with the values of public health, this idea of doing good for the public in the social realm. Many of the important leaders in public health – Dr. Foege, Dr. Tom Droege,^[15] and some of the other surgeon generals, for example – got their start in public health as missionary doctors. So there's been this commitment to serve and do good, and enough leaders had that familiarity to give some credibility to this work. When Dr. Satcher was CDC Director, he put a lot

Stephanie Doan-Soares: I think that's true, but also it might not be the case now. The ecosystem for this new field that's emerging is different than it was, even thinking about the healthcare sector. There used to be a lot more hospital systems run by the Methodist Church or the Catholic Church. I mean, there are still organizations with connections to these churches, but the connectedness isn't as strong as it used to be. Maybe another question for reflection might be what that means for the field of faith and health as this work moves forward, right?

Ashley Meehan: Yeah, I had a similar question for both of you. Religion and public health, as an explicit area of focus in schools of public health, really started emerging at the same time as we were navigating HIV/AIDS, and you talked about going through influenza and H1N1, and now we have COVID-19 and monkeypox. I'm curious how you see religion and health playing out in these two concurrent pandemics right now. What do you think is going to happen? What do you think the role of religion is both structurally but also in communities and in people's daily lives? What do you think it means that religion and health are maybe a bit more settled now, and not emerging alongside these pandemics?

Mimi Kiser: So the environment has changed considerably, including the religious environment and changing church membership. I would say

Now that the pandemic is less intense, one of the questions we have is, "How do we continue all of the energy of the public health and healthcare systems working together with these faith communities in a practical way?"

– Stephanie Doan-Soares

of his authority and directive towards faith-based work. Do you have thoughts about that?

that religious leaders became very important during the COVID-19 pandemic in addressing vaccine hesitancy and misinformation, and I think that kept religion and health alive in a particular

way. I'm really curious about how that stays alive in pandemic preparedness because I have never seen this many federal agencies take religion as seriously as they did during COVID-19, investing staff and programmatic resources, time, materials, strategies, and partnerships. It has been phenomenal – I've never seen it in my whole career. So, I don't have a prognosis for that. I'm really curious about where it will land.

Stephanie Doan-Soares: During the COVID-19 pandemic, I worked at a health system, the University of Massachusetts Memorial, a safety net hospital in central Massachusetts. I worked closely with a local task force that focused on the equity as part of the response to the virus. This task force came together with multiple interfaith partners, non-profits, and the city. Now that the pandemic is less intense, one of the questions we have is, "How do we continue all of the energy of the public health and healthcare systems working together with these faith communities in a practical way?" We've been having conversations about how we can transition this really effective task force to focus on the opioid epidemic or another high priority area. We want to make sure we learn from COVID-19 and maintain some of that momentum, but we're also not sure how much of that momentum is going to just fade away because everyone's really tired. I think a lot will depend on thoughtful and creative leaders who have the energy to carry this forward.

Ashley Meehan: I think that sets the stage really nicely for a call to action. How are we going to commit ourselves to this work, moving forward amidst a really overburdened public health workforce and communities that are stretched thin?

Mimi Kiser: I'm going to be curious to see how it unfolds. I will say, the Religion and Public Health Collaborative at Emory is still very active and alive at Emory, and there have been a number of leadership changes across Emory that I think are bringing in new momentum. Those leaders that are still here, Dr. Ellen Idler in Emory's College and Laney Graduate School, Dr. John Blevins in the

Rollins School of Public Health, and other faculty in the Candler School of Theology have worked to create a really solid, interdisciplinary curriculum. They provide a significant amount of support to students. I like to think we were starting the platform and creating the basis for this work, particularly with Dr. Idler's work around religion as a social determinant of health. Over the last ten years, a number of doctoral graduate students from the Department of Religion have engaged in this curriculum, so I'm really curious about how they're shaping their roles and the field as a whole.

Now, I'd like to switch gears and reflect with you, Stephanie, about what you experienced in graduate school at Harvard. Can you say what may be distinctive about the work at Harvard, and any predictions you may have about its future?

Stephanie Doan-Soares: Yeah, so I came to Harvard for my DrPH for a few reasons, one of which is because Harvard's program is really incredible and focused on the leadership aspects in addition to public health science. Pretty early on in my time here, I had a meeting with Dr. Howard Koh, who I had connected with while I was at HHS when he was the Assistant Secretary for Health at HHS. Dr. Koh talks quite openly about religion as a social determinant of health and how we think about a culture of health.

After I finished my first year at Harvard, Dr. Koh asked me to join a project for a few hours a week – writing this systematic review about religion and health. It ended up turning into a much bigger project than we expected. Our team of incredible research assistants reviewed all of the literature from 2000 to 2020. Our team looked at the impact of religion and spirituality on health outcomes from a public health perspective, both for the general population and among patients with more serious illnesses. We presented our findings to a group of experts, including Dr. Idler and Gary Gunderson, and many others, including what our recommendations were for the future. And the manuscript was published this summer in *JAMA*.^[16]

I think the approach at Harvard focuses a bit more on understanding the causality of religion on health, or how religion is a contributor to well-being and purpose and what that means for our health, as well as the role of spirituality among patients with serious illnesses. These themes are really central to the work led by Dr. Tyler VanderWeele, Dr. Tracy Balboni, and Dr. Koh. To me, that feels a little bit different from the approach at Emory, which might be more applied and focused on the social environment of communities, and also different from approaches at schools like Duke and Berkeley. All of these play an integral part in understanding religion and health, but they have slightly different angles.

Ashley Meehan: So, we are almost to the end of our time together. Are there any last-minute things you want to make sure are included? Any words of wisdom for new leaders or people considering this intersection?

Mimi Kiser: I am really glad that we are able to share about my and Stephanie's journeys, and that we got to see how Stephanie has really come alive in her work and in her leadership. But there is one more thing I want to make sure is captured in this conversation. In a new field, we have really great scholars, academics, and researchers, but I don't want us to miss out on the piece related to teaching and mentoring and supporting the creation of new students in this field. Investing in course development, supporting students in fieldwork, and advising students through this interdisciplinary study is critical to ensure the expansion and success of the field.

Stephanie Doan-Soares: Such a good point. That makes me think of one additional thing – I think another big piece of my learning at IHP was walking alongside you, Mimi, as I was going through all these experiences. I still vividly remember a conversation we had at Panera Bread about listening to myself and having more confidence in who I was. And that's just one example. I'm curious about what it was like for you as a faculty member, not only mentoring me but mentoring all of the students that you were

able to mentor. What was the intentional work that went into creating a space where new leaders could grow and flourish in this new interdisciplinary field?

Mimi Kiser: What a great question! I cared a lot about the field and realized that I could make a great contribution to the field by supporting the next generation of leaders. I have a natural tendency towards a supporting and developing role, and it's rewarding for me to engage in reflective conversations with people who have this commitment and who want to develop themselves in a way to make a difference. It's really inspiring for me to think about how people are becoming while the field is being created – it's not just the field, but co-creating possibilities for what this field can do. There's a need for this integrative thinking that can bring about change and create environments for people to thrive, and thrive equally.

This conversation with Mimi Kiser and Stephanie Doan-Soares took place over Zoom on August 16, 2022. The transcript has been edited for clarity and brevity.

[1]△Ashley Meehan, MPH, received her MPH in Global Health with a Certificate in Religion and Health from Emory University in May 2019, and worked at Emory's Interfaith Health Program (IHP) during the 2-year graduate program. She is currently a PhD student at Johns Hopkins Bloomberg School of Public Health (Ashleymeehan20@gmail.com).

[2]△Angela Monahan, MPH, is a contractor at the Department of Human and Health Services, and a graduate from the Infectious Diseases and Vaccinology master's program and the Public Health, Religion, and Spirituality Traineeship at the University of California Berkeley (angela.grace.monahan@gmail.com).
